Introduction

Validity of documentation

This documentation is valid for the product PNOZ s3. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

Definition of symbols

Information that is particularly important is identified as follows:

DANGER!

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

WARNING!

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

CAUTION!

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

NOTICE

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

> **INFORMATION**
>
> This gives advice on applications and provides information on special features.

Safety

Intended use

The safety relay provides a safety-related interruption of a safety circuit.

The safety relay meets the requirements of EN 60947-5-1 and EN 60204-1 and may be used in applications with:

▸ E-STOP pushbuttons

▸ Safety gates

▸ Light grids and safety switches with detection of shorts across contacts

The following is deemed improper use in particular

▸ Any component, technical or electrical modification to the product,

▸ Use of the product outside the areas described in this manual,

▸ Use of the product outside the technical details (see Technical details [📖 21]).

> **NOTICE**
>
> **EMC-compliant electrical installation**
>
> The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

Safety regulations

Safety assessment

Before using a device, a safety assessment in accordance with the Machinery Directive is required.

The product as an individual component fulfils the functional safety requirements in accordance with EN ISO 13849 and EN 62061. However, this does not guarantee the functional safety of the overall plant/machine. To achieve the relevant safety level of the overall plant/machine's required safety functions, each safety function needs to be considered separately.

Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by persons who are competent to do so.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

▸ Are familiar with the basic regulations concerning health and safety / accident prevention,

▸ Have read and understood the information provided in the section entitled Safety

▸ Have a good knowledge of the generic and specialist standards applicable to the specific application.

Warranty and liability

All claims to warranty and liability will be rendered invalid if

▸ The product was used contrary to the purpose for which it is intended,

▸ Damage can be attributed to not having followed the guidelines in the manual,

▸ Operating personnel are not suitably qualified,

▸ Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

Disposal

▸ In safety-related applications, please comply with the mission time T_M in the safety-related characteristic data.

▸ When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

▸ Note for overvoltage category III: If voltages higher than low voltage (>50 VAC or >120 VDC) are present on the unit, connected control elements and sensors must have a rated insulation voltage of at least 250 V.

Unit features

▸ Positive-guided relay outputs:

    – 2 safety contacts (N/O), instantaneous

▸ 1 semiconductor output

▸ Connection options for:

    – E-STOP pushbuttons

    – Safety gate limit switches

    – Start buttons

    – Light grids and safety switches with detection of shorts across contacts

▸ A connector can be used to connect 1 PNOZsigma contact expansion module

▸ Operating modes can be set via rotary switch

▸ LED indicator for:

    – Supply voltage

    – Input status, channel 1

    – Input status, channel 2

    – Switch status channel 1/2

    – Start circuit

    – Error

▸ Plug-in connection terminals (either spring-loaded terminal or screw terminal)

▸ See order reference for unit types

Safety features

The safety relay meets the following safety requirements:

▸ The circuit is redundant with built-in self-monitoring.

▸ The safety function remains effective in the case of a component failure.

▸ The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.
Block diagram/terminal configuration

Fig.: Centre: Front view with cover, right: Front view without cover

*Insulation between the non-marked area and the relay contacts: Basic insulation (overvoltage category III), Protective separation (overvoltage category II)

Function description

▸ $\overline{\text{In2+}}$ Single-channel operation: no redundancy in the input circuit, earth faults in the start circuit and input circuit are detected.

▸ Dual-channel operation without detection of shorts across contacts: Redundant input circuit, detects PNOZ s3

    – earth faults in the start and input circuit,

    – short circuits in the input circuit and, with a monitored start, in the start circuit too.

▸ $\overline{\text{In2-}}$ Dual-channel operation with detection of shorts across contacts: Redundant input circuit, detects PNOZ s3

    – earth faults in the start and input circuit,

    – Short circuits in the input circuit and, with a monitored start, in the start circuit too,

    – Shorts across contacts in the input circuit.

▸ **A** Automatic start: Unit is active once the input circuit has been closed.

▸ Manual start Unit is active once the input circuit and the start circuit are closed.

▸ Monitored start with falling edge: Unit is active once

    – the input circuit is closed and then the start circuit is closed and opened again.

    – the start circuit is closed and then opened again once the input circuit is closed.

▸ Monitored start with rising edge: Unit is active once the input circuit is closed and once the start circuit is closed after the waiting period has elapsed (see technical details).

▸ Start with start-up test: The unit checks whether safety gates that are closed are opened and then closed again when supply voltage is applied.

Increase in the number of available instantaneous safety contacts by connecting contact expander modules or external contactors/relays;
A connector can be used to connect 1 PNOZsigma contact expansion module.

▸ t_2: Delay-on de-energisation

▸ t_3: Waiting period with a monitored start

▸ t_4: Min. start pulse duration with a monitored start

Installation

Install base unit without contact expansion module:

▸ Ensure that the plug terminator is inserted at the side of the unit.

Connect base unit and PNOZsigma contact expansion module:

▸ Remove the plug terminator at the side of the base unit and at the contact expansion module.

▸ Connect the base unit and the contact expansion module to the supplied connector before mounting the units to the DIN rail.

Installation in control cabinet

▸ The safety relay should be installed in a control cabinet with a protection type of at least IP54.

▸ Use the notch on the rear of the unit to attach it to a DIN rail (35 mm).

▸ When installed vertically: Secure the unit by using a fixing element (e.g. retaining bracket or end angle).

▸ Push the device upwards or downwards before lifting it from the DIN rail.

Wiring

Please note:

▸ Information given in the "Technical details [📖 21]" must be followed.

▸ Outputs 13-14 and 23-24 are safety contacts, the semiconductor output Y32 is an auxiliary output (e.g. for display).

▸ Semiconductor output Y32 should **not** be used for safety circuits!

▸ To prevent contact welding, a fuse should be connected before the output contacts (see Technical details [📖 21]).

▸ Calculation of the max. cable length I_{max} in the input circuit:

$$I_{max} = \frac{R_{Imax}}{R_I\,/\,km}$$

R_{Imax} = max. overall cable resistance (see Technical details [📖 21])
$R_I\,/\,km$ = cable resistance/km

▸ Use copper wiring with a temperature stability of 75 °C.

▸ To prevent EMC interferences (particularly common-mode interferences) the measures described in EN 60204-1 must be executed. This includes the separate routing of cables of the control circuits (input, start and feedback loop) from other cables for energy transmission or the shielding of cables, for example.

▸ Adequate protection must be provided on all output contacts with capacitive and inductive loads.

▸ When connecting magnetically operated, reed proximity switches, ensure that the max. peak inrush current (on the input circuit) does not overload the proximity switch.

▸ The power supply must comply with the regulations for extra low voltages with protective electrical separation (SELV, PELV) in accordance with VDE 0100, Part 410.

Preparing for operation

Operating modes

The operating mode is set via the rotary switch on the unit. You can do this by opening the cover on the front of the unit.
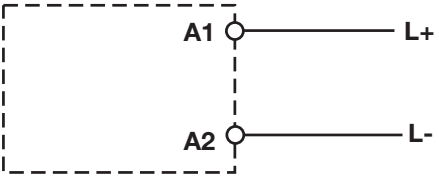

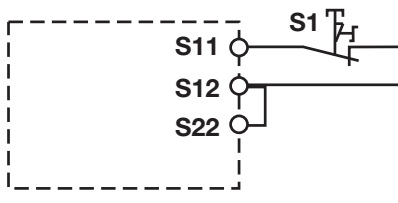

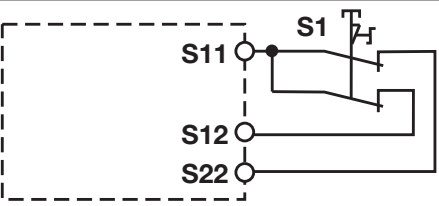

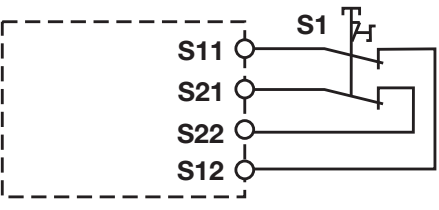

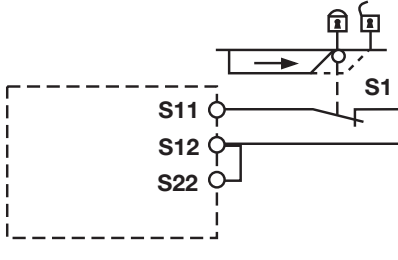

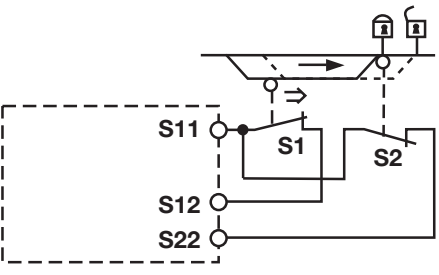

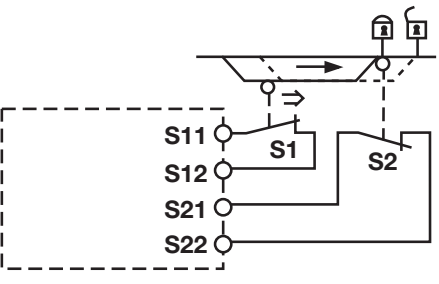

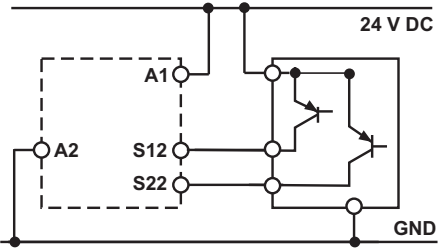

> **NOTICE**
>
> Do not adjust the rotary switch during operation, otherwise an error message will appear, the safety contacts will open and the unit will not be ready for operation until the supply voltage has been switched off and then on again.

Set operating modes

▸ Switch off supply voltage.

▸ Select operating mode via the operating mode selector switch "mode".

▸ If the operating mode selector switch "mode" is in its start position (vertical position), an error message will appear.

Operating mode selector switch "mode"	Automatic or manual start	Monitored start rising edge	Monitored start falling edge	Automatic start with start-up test
Without detection of shorts across contacts	In2+ In2- A	In2+ In2-	In2+ In2-	In2+ In2-
With detection of shorts across contacts	In2+ In2- A	In2+ In2-	In2+ In2-	In2+ In2-

Connection

Supply voltage	AC	DC

Input circuit	Single-channel	Dual-channel
E-STOP **without** detection of shorts across contacts		
E-STOP **with** detection of shorts across contacts		
Safety gate **without** detection of shorts across contacts		
Safety gate **with** detection of shorts across contacts		
Light beam device or safety switch, detection of shorts across contacts via ESPE		

NOTICE

With single-channel wiring the safety level of your machine/plant may be lower than the safety level of the unit (see Safety characteristic data [📖 26]).

NOTICE

When operated with a light grid or sensor

- It must not be possible to switch off the supply voltage for the PNOZ-sigma separately from the supply voltage for the light grid or safety switch.
- The operating mode selector switch must be set to "Without detection of shorts across contacts", as shorts across contacts are detected by the ESPE.

Start circuit/feedback loop	Without feedback loop monitoring	with feedback loop monitoring
Automatic start		
Monitored, manual start/restart		

NOTICE

In the event of an automatic start or manual start with bridged start contact (fault):

The unit starts up automatically when the safeguard is reset, e.g. when the E-STOP pushbutton is released. Use external circuit measures to prevent an unexpected restart.

Semiconductor output

Y32 ◦———— PLC Input   *
*Connect together the 0V connections on all the external power supplies

Application examples

Emergency stop

▸ Dual-channel

▸ with detection of shorts across contacts

▸ Monitored start

▸ falling edge with feedback loop monitoring
Safety gate

▸ Dual-channel

▸ with detection of shorts across contacts

▸ Monitored start

▸ falling edge with feedback loop monitoring
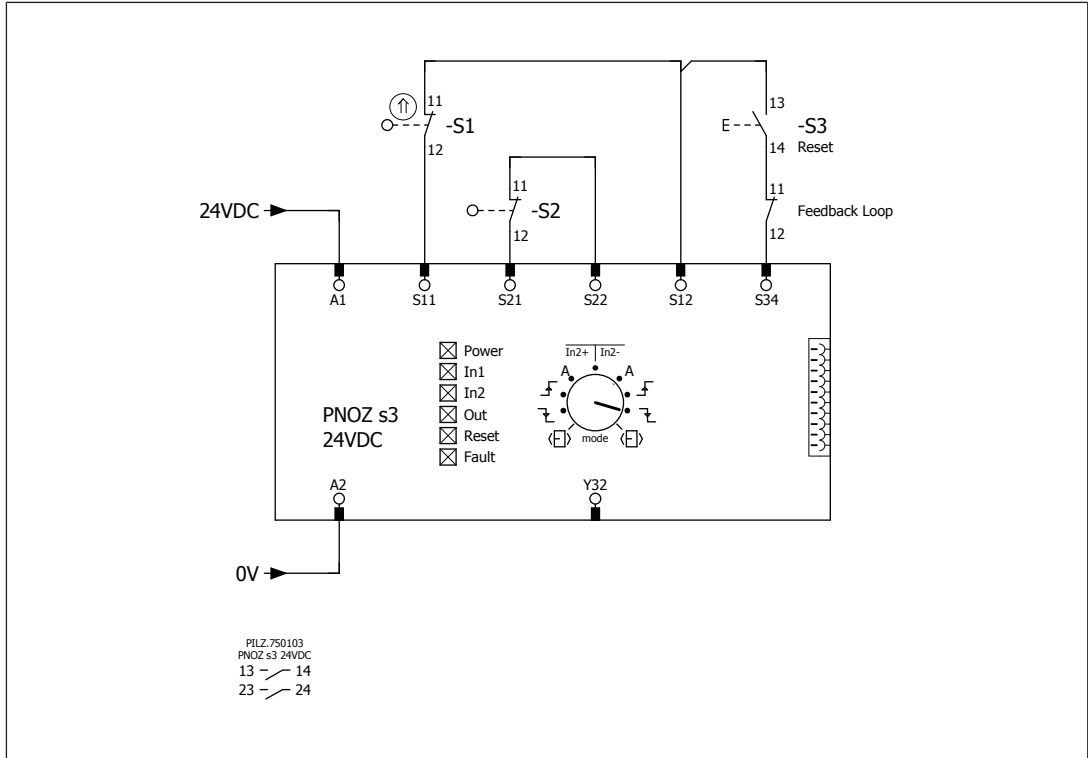

OSSD signals

▸ Dual-channel

▸ without detection of shorts across contacts of PNOZ - detection of shorts across contacts by sensor technology

▸ Automatic start

▸ with feedback loop monitoring
Operation

When the relay outputs are switched on, the mechanical contact on the relay cannot be tested automatically. Depending on the operational environment, measures to detect the non-opening of switching elements may be required under some circumstances.

When the product is used in accordance with the European Machinery Directive, a check must be carried out to ensure that the safety contacts on the relay outputs open correctly. Open the safety contacts (switch off output) and start the device again, so that the internal diagnostics can check that the safety contacts open correctly
▸ for SIL CL 3/PL e at least 1x per month

▸ for SIL CL 2/PL d at least 1x per year

> **NOTICE**
>
> The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

The unit is ready for operation when the Power LED is permanently lit.
LEDs indicate the status and errors during operation:

☼	LED on
◖	LED flashes
●	LED off

> **INFORMATION**
>
> Status indicators and error indicators may occur independently. In the case of an error display, the "Fault" LED will light or flash (exception: "Supply voltage too low"). An LED that is also flashing indicates the potential cause of the error. An LED that is lit and is static indicates a normal operating status. Several status indicators and error indicators may occur simultaneously.

Status indicators

☼ **POWER**

Supply voltage is present.

☼ **IN1**
Input circuit at S12 is closed.

☼ **IN2**
Input circuit at S22 is closed.

☼ **OUT**
Safety contacts are closed and semiconductor output Y32 carries a high signal.

☼ **RESET**

24 VDC is present at S34.

Error indicators

● **All LEDs off**

Diagnostics: Short across contacts/earth fault; unit switched off

▸ Remedy: Rectify short across contacts/earth fault, switch off supply voltage for 1 min.

☀ **FAULT**

Diagnostics: Plug terminator not connected

▸ Remedy: Insert plug terminator, switch supply voltage off and then on again.

◖ **FAULT**

Diagnostics: Internal error, unit defective

▸ Remedy: Switch supply voltage off and then on again, change unit if necessary.

◖ **POWER**

Diagnostics: Supply voltage too low

▸ Remedy: Check supply voltage and increase if necessary.

◖ **IN1, IN2 alternately**　　☀　　**FAULT**

Diagnostics: Connection error (possibly: cable resistance in the input circuit is too high) or short detected between S12 and S22

▸ Remedy: Rectify connection error or short across contacts, switch supply voltage off and then on again.

◖ **IN1**　　☀　　**FAULT**

Diagnostics: Power-up blocked due to short-term interruption at S12; input circuits not operated simultaneously

▸ Remedy: Open both input circuits, S12 and S22, simultaneously and then close again.

◖ **IN2**　　☀　　**FAULT**

Diagnostics: Power-up blocked due to short-term interruption at S22; input circuits not operated simultaneously

▸ Remedy: Open both input circuits, S12 and S22, simultaneously and then close again.

◑ **RESET** ☀ **FAULT**

Diagnostics: Position of rotary switch is not permitted or rotary switch was adjusted during operation.

▸ Remedy: Switch supply voltage off and then on again.

☀ **POWER, IN1, IN2, OUT, RESET, FAULT**

Diagnostics: The operating mode selector switch "mode" is in its start position (vertical position)

▸ Remedy: Switch off the supply voltage and set the required operating mode on operating mode selector switch "mode".

Faults - malfunctions

▸ Contact malfunctions: If the contacts have welded, reactivation will not be possible after the input circuit has opened.

Dimensions in mm

*with spring-loaded terminals

Safety characteristic data

> **NOTICE**
>
> You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

Operating mode	EN ISO 13849-1: 2015	EN ISO 13849-1: 2015	EN 62061 SIL CL	EN 62061 PFH$_D$ [1/h]	IEC 61511 SIL	IEC 61511 PFD	EN ISO 13849-1: 2015
	PL	Category					T$_M$ [year]
Safety contacts, instantaneous	PL e	Cat. 4	SIL CL 3	2,31E-09	SIL 3	2,03E-06	20

Explanatory notes for the safety-related characteristic data:

▸ The SIL CL value in accordance with EN 62061 corresponds to the SIL value in accordance with EN 61508.

▸ T$_M$ is the maximum mission time in accordance with EN ISO 13849-1. The value also applies as the retest interval in accordance with EN 61508-6 and IEC 61511 and as the proof test interval and mission time in accordance with EN 62061.

All the units used within a safety function must be considered when calculating the safety characteristic data.

> **INFORMATION**
>
> A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

Classification according to ZVEI, CB24I

The following tables describe the classes and specific values of the product interface and the classes of interfaces compatible with it. The classification is described in the ZVEI position paper "Classification of Binary 24 V Interfaces - Functional Safety aspects covered by dynamic testing".

Input	
Interfaces	
Drain	
Interface	**Module**
Class	**C0**
Source	
Interface	**Sensor**
Class	**C1, C2, C3**
Drain parameters	
Max. test pulse duration	**2 ms**
Min. input resistance	**0,5 kOhm**
Max. capacitive load	**10 nF**

Relay outputs	
Interfaces	
Source	
Interface	**Module**
Class	**A**
Drain	
Interface	**Actuator**
Class	**A**
Source parameters	
Min. switching voltage	**12 V**
Max. switching voltage	**250 V**
Min. switching current	**0,003 A**
Max. switching current	**6 A**
Potential isolation	**yes**

Supplementary data

⚠️ **CAUTION!**

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switch frequency and the load of the relay output.
If the service life graphs are not accessible, the stated PFH value can be used irrespective of the switch frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

Fig.: Service life graphs at 24 V DC and 230 V AC

Fig.: Service life graphs at 110 V DC

Example

▸ Inductive load: 0.2 A

▸ Utilisation category: AC15

▸ Contact service life: 2 000 000 cycles

Provided the application to be implemented requires fewer than 2 000 000 cycles, the PFH value (see Technical details [📖 21]) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all output contacts. With capacitive loads, any power surges that occur must be noted. With DC contactors, use flywheel diodes for spark suppression.

Permitted operating height

The values stated in the technical details apply to the use of the device in operating heights up to max. 2000 m above sea level. When used in greater heights, constraints have to be taken into account:

▸ Permitted maximum operating height 5000 m

▸ Reduction of rated insulation voltage and rated impulse withstand voltage for applications with safe separation:

Maximum operation height	Rated insulation voltage	Overvoltage category	Max. rated impulse withstand voltage
3000 m	150 V	II	2.5 kV
	100 V	III	2.5 kV
4000 m	150 V	II	2.5 kV
	100 V	III	2.5 kV
5000 m	100 V	II	1.5 kV
	24 V	III	0.8 kV

▸ Reduction of rated insulation voltage and rated impulse withstand voltage for applications with basic insulation:

| Maximum operation height	Rated insulation voltage	Overvoltage category	Max. rated impulse withstand voltage
3000 m	250 V	II	2.5 kV
	150 V	III	2.5 kV
4000 m	250 V	II	2.5 kV
	150 V	III	2.5 kV
5000 m	150 V	II	1.5 kV
	100 V	III	1.5 kV

▸ From an operating height of 2000 m the max. permitted ambient temperature is reduced by 0.5 °C/100 m

Operating height	Permitted ambient temperature
3000 m	50 °C
4000 m	45 °C
5000 m	40 °C

Remove plug-in terminals

Procedure: Insert the screwdriver into the housing recess behind the terminal and lever the terminal out.

Do **not** remove the terminals by pulling the cables!
Order reference

Product type	Features	Connection type	Order no.
PNOZ s3	24 V DC	Screw terminals	750103
PNOZ s3 C	24 V DC	Spring-loaded terminals	751103
